

## **BRIEF INFORMATION**

Tajik academician research and educational network association “TARENA” established in July 2000, registered in the Ministry of Justice of Republic of Tajikistan (certificate of registration # 649 from 10<sup>th</sup> august 2000)

The main aim of the “TARENA” is cooperate to forming of high developed information society of Tajikistan, which embrace scientific organization of Academy of Sciences, Higher Educational Establishments and other scientific, research and educational institutions.

### **There are nine higher educational establishments and nine institutes in Academy of Science:**

- Tajik State National University.
- Tajik State Pedagogical University.
- Tajik Technical University
- Russian-Tajik Slavonic University
- Tajik State Medical University
- Technological university of Tajikistan
- Tajik Agricultural University
- Tajik State University of Commerce
- Tajik Tax and Legal University

### **Institutes of Academy of Science**

- Astrophysics
- Physiology of Plants and Genetic
- Chemistry
- Gastroenterology
- Seismic-proof constructing and seismology
- Mathematics
- Physic and Technical
- Geology
- Botanic

In January 2002 “TARENA” received the License for realizing of telecommunication services and establishment of corporative network (license # 2-072 from 24.01.02) for 5 years, according to license agreements, telecommunication services may be provided after the coordination all of the technical specifications of the received equipment with technical inspection of Ministry of Communications. According to this, after receiving of necessary equipment’s and coordination of it’s specification with the State inspection of Communications we should not have any further problems.

At present time, with financial support of NATO scientific committee we had finished first period of work, and the network, which unites all academic institutes is created.

We had finished the spade-work of DuSciNet, which stipulate the establishment of the united corporate network of the Higher Educational Institutions and Academic Institutions. After delivery and implementation of the equipment of DuSciNet project, creation of the network will be fully finished. We also have done

preliminary work for the “Virtual Silk Highway” project. The best physical place for the satellite dish installation was determined – Tajik Technical University. This would be the best since all of the coordination equipment for DuSciNet network and “Silk” project will be located at the same place and management of the equipment would be simplified. Technical personnel also were determined, the peoples, who have passed courses in August 2002 in Budapest. Also we’re preparing network administrators for the local nodes. We hope that all of the necessary requirements are fulfilled and ready for use of the equipment for the both projects “DuSciNet” and “Silk”

With Kind Regards,  
Chief of the executive committee  
of TARENA

Sadikov Kh. R.
